RE: FORMER MANUFACTURING SITE PHASE II ENVIRONMENTAL SITE ASSESSMENT

To Whom It May Concern:

HRP Associates, Inc. (HRP) has completed a Phase II Environmental Site Assessment (ESA) of the property located at 510-514 West Liberty Street, Rome, New York (herein referred to as the "Site"). Based on HRP's information collected to date, HRP offers the following recommendations:

Suspect asbestos containing materials (ACM) (including pipe wrap, vinyl floor tile, window glazing compound, and dry wall) were observed inside or along the exterior of the manufacturing building. An asbestos survey should be conducted to determine if ACM are present within the Site building.

SVOCs and metals are present on-site at concentrations exceeding Restricted Residential Use Soil Cleanup Objectives in surface and subsurface soils. Additionally, SVOCs are present in Site groundwater at concentrations exceeding applicable Technical and Operational Guidance Series regulatory standards. Exposure pathways to sensitive receptors are limited under the current use of the Site, however, impacted soils should be managed to protect potential receptors during redevelopment and future use. Based on the data collected and the intended future use of the Site, it may be an appropriate path forward to redevelopment to enter the NYSDEC Brownfields Cleanup Program, the Environmental restoration program, or to manage Site soils in accordance with NYSDEC 6NYCRR Part 360.

If you have any questions or require additional information, please feel free to contact HRP at (518) 877-7101.

Sincerely,
HRP Associates, Inc.

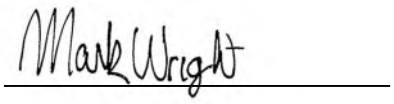
I, Mark Wright, certify that I am currently a Qualified Environmental Professional as defined in 6 NYCRR Part 375 and that this Report was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10) and that all activities were performed in full accordance with the DER-approved work plan and any DER-approved modifications.



Mark Wright - Contract Manager

1.0 INTRODUCTION

This report presents the results of the Phase II Environmental Site Assessment (ESA) completed by HRP Associates, Inc. (HRP) in June 2023 at the Former Manufacturing Site located at 510-514 West Liberty Street, Rome, New York (referred to herein as the Site) (**Figure 1**). The investigation assessed environmental impacts associated with the past uses of the Site as a textile mill, an unknown manufacturer, and an automobile repair shop. The Phase II ESA was completed for the Mohawk Valley Economic Development Growth Enterprises Corporation (Mohawk Valley EDGE).

Interpretations presented within this report are based primarily on the investigations described herein. Applicable data from available documents and environmental investigations in the area surrounding the Site have been included in sections of this report.

1.1 Report Organization

The text of this report is divided into seven sections. Immediately following the text are the figures, tables, and appendices. A summary of each report section is provided below:

Section 1.0 Introduction: Report organization followed by Site description, a Site commercial/industrial history, previous environmental investigations and records, and description of identified areas of concern.

Section 2.0 Physical Characteristics of the Site: Includes descriptions of physical characteristics, including Site topography, soils, geology, and hydrogeology.

Section 3.0 Field Activities: Summarizes field activities associated with the Phase II ESA, including subsurface soil and groundwater investigations.

Section 4.0 Nature and Extent of Contamination: Presents the analytical results of soil and groundwater sampling performed for the Phase II ESA.

Section 5.0 Conclusions: Presents a discussion of the results and conclusions for the Site.

Section 6.0 Recommendations: Presents a discussion of the recommendations for the Site.

Section 7.0 References: Provides a list of references used throughout this report.

1.2 Site Description

The Former Manufacturing Site is located at 510-514 West Liberty Street in the City of Rome, Oneida County, New York, (Tax Parcel 242.006-0003-063). The Site location is depicted on **Figure 1**.

The 0.86-acre Site is occupied by a two-story, 9,544 square foot manufacturing building and a 209 square foot outbuilding that includes a basement. The manufacturing building consists of a two-story southern portion, historically used for textile manufacturing, and a single-story northern portion, historically used as a maintenance garage. The Site buildings are currently vacant. The remainder of the Site includes a partially paved area in the northern portion of the Site, a grass and vegetated area in the western portion of the Site, and a lumber pile is located in the northwest portion of the Site. A Site plan depicting Site features, AOCs, and proposed investigation locations is included as **Figure 2**.

Land use in the vicinity of the Site consists of mostly residential properties with some commercial properties.

Properties immediately adjacent to the Site are described below.

North:
- West Park Street; and
- Residential properties.

South:
- West Liberty Street; and
- Residential Properties.

East:
- 508 West Liberty Street, listed as NYSDEC Site No. E633058 a Class C (Completed) site in the Environmental Restoration Program.

West:
- Wood Creek.

1.3 Site Industrial/Commercial History

The Site has been developed for industrial manufacturing purposes since at least 1884. The Site operated as a brewery by Vidvard's Brewery in 1888. The Columbia Knitting Mill and Sinnott Textile Corporation operated on-site from approximately 1904 to 1924 and 1930 to 1949, respectively. Additionally, Ammon Milk Products occupied the Site in 1921, however it is unknown what operations took place and when they vacated the Site. The Site was then utilized as multi-tenant apartments in 1936. Rome Tobacco Company utilized the Site for manufacturing purposes from approximately 1949 until at least 1969. The Salvation Army also occupied the Site from approximately 1974 to 1979. X-Cel Enterprises occupied the Site from approximately 1979 until 1989 and operations at that time are unclear, however, the facility is listed as a RCRA Small Quantity Generator, permitted to generate nonhalogenated solvents, benzene, and xylene. The Site was most recently occupied by residential tenants until approximately 2017.

1.4 Previous Environmental Investigations and Records

Two Phase I ESAs have been performed at the Site to-date.

510-514 West Liberty Street Phase I ESA
Prepared by Barton & Loguidice, D.P.C. – February 2020

Barton & Loguidice, D.P.C. (B & L) was retained by the City of Rome to conduct a Phase I ESA of the Site.

The following Recognized Environmental Conditions (RECs) were identified by B & L at the Site.

- Historical uses of the site include a textile mill, an unknown manufacturer (X-Cel Enterprises) and an automobile repair shop. Data on use, storage, and disposal of petroleum products or hazardous materials has not been obtained during the Phase I ESA for the periods when the Site was used for industrial uses. The potential for releases of petroleum products or hazardous materials from past industrial use of the Site is a REC.

- The potential presence of a 300-gallon underground storage tank (UST) of unknown condition represents a material threat to release its contents and is considered to be a REC.

The following data gaps were identified by B & L at the Site.

- Large areas of the floors in the buildings were obstructed from view due to the presence of equipment, parts and miscellaneous stored items.

- The basement of the outbuilding was accessible, but the floor surface was not readily visible due to a layer of ice causing safety concerns.

- Two to three inches of snow cover prevented visual inspection of the ground surface at the site.

- Interviews and documents were not obtained for the period that the site was used for manufacturing.

510-514 West Liberty Street Phase I ESA
Prepared by HRP Associates, Inc. – December 2022

HRP was retained by Mohawk Valley EDGE (MVEDGE) to perform a review and addendum of the B & L Phase I ESA.

The following RECs were identified by HRP at the Site.

- The presence of standing petroleum liquid and petroleum staining on the floor of the garage around the metal petroleum cannister case is evidence of a release and is therefore considered a REC.
- The PBS database lists two historic #2 fuel oil USTs on-site associated with X-Cel Enterprises. One UST is listed as in-service while the other is listed as closed. The locations and current

status of USTs is unknown, and tank closure documents were not available for review. The unknown location and status of current/former petroleum USTs located on-site, and the lack of tank closure documents is considered a REC.

- Industrial use and manufacturing operations occurred on-site between the late 1800s to the early 2000s. The Site was registered as a RCRA small quantity generator of hazardous wastes including non-halogenated solvents, benzene, and xylene. Specific operations associated with the use, storage, and disposal of hazardous substances and petroleum products in the Site's industrial history are unknown. The potential for the release of petroleum and hazardous substances pre-RCRA regulation is considered a REC.

- Many drums inside of the Site buildings were unlabeled, turned over, and rusted. It is unknown what these drums contained, or if a release occurred. Information relating to the historic usage, storage, and disposal of petroleum products and hazardous substances in the manufacturing building and outbuilding was not available for review. The presence of these drums on-site is considered a REC.

Additionally, HRP identified several features of interest during the review of historical documents and Site visits. HRP identified:

- A former automotive storage house located on the southern portion of the Site (Automotive Storage House 1).
- A former automotive storage house located on the northern portion of the Site (Automotive Storage House 2).
- A former coal house located in the central portion of the Site.
- A waste oil burner and 55-gal drums located in the basement of the Outbuilding.
- A historic 255-gal above ground storage tank (AST).

The former use of the Site as a knitting mill was identified as significant due to the common historic use of solvents in the wool scouring, fabric finishing, and yarn dyeing and finishing processes.

1.5 Areas of Concern (AOCs)

Based on the findings of the Phase I ESAs, HRP identified the following AOCs to be investigated as part of the Phase II ESA:

1. The Garage Area of the manufacturing building to identify potential impacts related to:
    a. Standing petroleum product and leaking containers observed in the metal containment unit and staining observed on the concrete floor near the unit.
    b. Unlabeled 55-gallon drums and household cleaners/solvents.
    c. A 225-gallon unregistered fuel oil AST
2. The textile manufacturing building to identify potential releases of petroleum and hazardous substances due to former manufacturing operations.
3. The historic footprint of Automotive Storage House 1 to identify potential impacts due to the use of petroleum products.
4. The historic footprint Automotive Storage House 2 to identify potential impacts due to the use of petroleum products.
5. In the historic footprint of a former coal house to identify potential impacts due to coal storage.

6. The outbuilding to identify potential releases of petroleum or hazardous substances from the 55-gallon drums and waste oil burner located in the basement.
7. The two USTs registered to the Site to identify the locations of the USTs and potential impacts related to the release of No. 2 fuel oil.

AOCs and investigation locations are depicted in **Figure 2**.

1.6 Contaminants of Concern (COCs)

Based on the findings of the Phase I ESA, HRP identified the following contaminants of concern (COCs) to be investigated as part of the Phase II ESA:

- Volatile organic compounds (VOCs) associated with:
  - Wastes generated by X-Cel Enterprises which included non-halogenated solvents, benzene, and xylene.
  - Historical textile manufacturing operations which may have used chlorinated halogenated solvents such as PCE and TCE, and non-halogenated solvents.
  - Petroleum products presently and historically stored throughout the Site.
- Polyaromatic hydrocarbons (PAHs) associated with:
  - Petroleum products presently and historically stored throughout the Site.
  - Coal and coal ash historically stored in the former coal house.
- Metals associated with:
  - Historic automotive maintenance in the garage and former automotive storage houses.
  - Coal and coal ash stored in the former coal house.

In addition to the contaminants described above, the presence of the following contaminants will be evaluated to satisfy investigation requirements necessary for admittance into NYSDEC remediation programs:

- Semi-volatile organic compounds (SVOCs)
- Polychlorinated biphenyls (PCBs)
- Chlorinated pesticides
- Chlorinated herbicides
- 1,4-dioxane
- Per-and polyfluoroalkyl substances (PFAS)

2.0 PHYSICAL CHARACTERISTICS OF THE SITE

The following section discusses the physical characteristics and setting of the Site.

2.1 Site Topography

Topography of the Site slopes gently to the west towards Wood Creek. The eastern boundary of the Site lies approximately at 455 feet above mean sea level (ft amsl) while the western boundary lies approximately at 449 ft amsl. Topography of the surrounding area, within one mile of the Site, is relatively flat sloping gently south.

2.2 Soils

According to the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS), the Site is entirely composed of Alton-Urban land complex, 0 to 3 percent slopes. The typical soil profile for Alton-Urban land complex is gravelly loam followed by very gravelly fine sandy loam, very gravelly sandy loam, then very gravelly loamy sand. Surficial geology at the Site is identified as outwash sand and gravel on the Hudson Mohawk Sheet of the Surficial Geologic Map of New York State (Donald H., Cadwell, Robert J. Dinean, 1987). The unit ranges from 2 to 20 meters in thickness and is predominantly composed of coarse to fine gravel with sand and proglacial fluvial deposits.

Soil borings advanced during the Phase II ESA indicated that Site soils generally consisted of fill with two distinct, location dependent fill compositions identified. Subsurface soils beneath the Garage Area and the Textile Manufacturing Building were generally composed of gravelly silt containing trace amounts of fill materials including metal slag, cinders, ash, brick, and wood at depths ranging from 0 to 2 feet below grade (ft bg). Subsurface soils beneath sections of the Site not covered by the Garage Area and the Textile Manufacturing Building were generally composed of a sand and silt matrix with varying amounts of gravel and contained trace amounts of fill material including cinders, ash, brick, and wood at depths ranging from 0 to 15 ft bg. The presence of these soils suggests that imported fill was brought to the Site in the past to build up the area for construction and land use associated with historic Site use. Native soils consisting of clay were generally observed beneath fill material at depths ranging from 15 to 20 ft bg in areas not covered by the Garage Area or the Textile Manufacturing Building.

2.3 Geology

Site bedrock geology is identified as the Utica Shale on the Hudson Mohawk Sheet of the Bedrock Geologic Map of New York State (Fischer, et al., 1970). This unit is described as a black-shale mudstone bedrock that belongs to the Lorraine, Trenton, and Black River groups. Bedrock was not encountered during Site investigation activities.

2.4 Hydrogeology

Surface Water

Wood Creek is located west and adjacent to the Site. Wood Creek is listed as a Class D waterbody and identified on the NYSDEC Waterbody Inventory/Priority Waterbodies List (PWL) as ID No. 0703-0012.

Groundwater

Three overburden monitoring wells, MW-1, MW-2, and MW-3 were installed as part of the Phase II ESA. Depth to water measurements recorded at the three monitoring wells on June 22, 2023 ranged from 12.14 to 14.10 feet below top of casing and indicate groundwater flow is to the west, towards Wood Creek.

Nine active water supply wells were reported by the USGS, USDS PWS, and State Databases within 1.0 mile of the Site with the closest water supply well located approximately 800 feet from the Site.

3.0 FIELD ACTIVITIES

Field activities were completed at the Site in accordance with the Site-specific Quality Assurance Project Plan (QAPP), Former Manufacturing Property, 510-514 West Liberty Street, Rome, New York 13340, dated May 3, 2023. A description of the field activities conducted during this Phase II ESA is presented in this Section.

Deviations based on field conditions are noted in **Section 3.5**. The investigation tasks described in the Site-specific QAPP utilized the NYSDEC's *DER-10, Technical Guidance for Site Investigation and Remediation*, dated May 2010 (DER-10). HRP followed the procedures outlined in the QAPP and Health and Safety Plan (HASP).

Field work for this Phase II ESA was conducted in several mobilizations to the Site and included the following tasks:

- A ground penetrating radar (GPR) survey conducted to identify subsurface utilities and anomalies on-site (June 12, 2023);
- Installation of nine soil borings (June 12 through Jun 13, 2023);
- Installation of three hand borings (June 13, 2023);
- Collection of three hand boring soil samples and nine subsurface soil samples from the three hand borings and the nine soil borings for laboratory analysis (June 12 through June 13, 2023);
- Installation of three permanent 2-inch diameter overburden monitoring wells and one temporary 1-inch diameter overburden monitoring well (June 13, 2023);
- Collection of one groundwater samples from both the temporary monitoring well and the sump located in the basement of the Outbuilding (June 13, 2023);
- Development of three permanent 2-inch diameter overburden monitoring wells (June 13, 2023);
- Completion of a relative elevation Site survey (June 13, 2023); and
- Collection of three groundwater samples from the three newly installed monitoring wells (June 22, 2023).

3.1 Geophysical Investigations

On June 12, 2023, a ground penetrating radar (GPR) survey was conducted across the Site by American Geophysics. GPR surveying is a nonintrusive, subsurface geophysical investigation technique that detects subsurface structures by transmitting electromagnetic waves from an antenna into the ground. The antenna then monitors the strength and time delay of the return signal. The return signal is then evaluated for any anomalies, which by their size, shape and orientation can be interpreted as voids, USTs, utility pipelines, soil-bedrock interface or areas of different sediment compaction. A radio frequency (RF) line locator was also used to identify subsurface utility lines based on the presence of 120 hertz signal (electric) and transmitted signals from the RF transmitter.

The objective of the survey was to clear soil boring locations on-site, mark utilities entering the Site, and identify subsurface anomalies including USTs. A 10-foot radius was scanned around each of the nine proposed soil boring locations and no anomalies were identified.

The GPR Survey report provided by American Geophysics is included in **Appendix A**.

3.2 Soil Characterization

To characterize the Site soils and to investigate impacts related to historic Site operations, HRP and Nature's Way Contracting (NW Contracting) mobilized to the Site on June 12, 2023, and installed soil borings in order to log, screen, and collect soil samples. A total of three hand borings (HB-1 through HB-3) were installed via hand auger. Prior to hand boring activities, NW Contracting cored holes through the concrete slab of the Garage Area and the Textile Manufacturing Building utilizing a concrete coring bit. HRP advanced a stainless-steel auger into the soil approximately 1 foot below the concrete slab of the building.

In addition to hand borings, nine soil borings (SB-1 through SB-9) were advanced by NW Contracting using a GeoProbe 66DT track mounted drill rig to a total depth of 20 ft bg. Soil samples were collected continuously with a macro-core sampler in five-foot intervals. All non-disposable soil sampling equipment was decontaminated between samples using an Alconox wash followed by a clean water rinse. Boreholes that were not completed as monitoring wells were backfilled using drill cuttings and bentonite chips.

Soil samples were logged by grain size, color, moisture, presence of fill material, and obvious physical evidence of contamination (e.g. odor, staining). A small portion (1-2 oz.) of each sample was placed in a polyethylene zip top bag and allowed to attain ambient temperature before PID headspace analysis. PID headspace analysis measurements and soil descriptions are presented on soil boring logs included in **Appendix B**.

Following soil logging, HRP placed an adequate volume of soil from each sampling location into the appropriate containers. The sample jars were appropriately labeled and placed on ice in a cooler. Each soil sample collected was submitted under chain of custody to an Environmental Laboratory Approval Program (ELAP) certified laboratory.

All soil sample locations and AOCs are depicted in **Figure 2** and soil sampling information is summarized on **Table 1**.

3.3 Groundwater Investigations

Monitoring Well Installation

On June 12 and 13, 2023, three overburden monitoring wells (MW-1, MW-2, and MW-3) were installed by NW Contracting. The overburden wells were installed using a track-mounted GeoProbe 66DT drill rig. Monitoring wells MW-1, MW-2, and MW-3 were installed at the soil boring SB-2, SB-6, and SB-9 locations, respectively. Each monitoring well was installed to a depth of 18 ft bg with 10-foot screens. Monitoring well MW-2 was installed in response to field observations which noted soil staining present during the installation of soil boring SB-6. Monitoring wells were constructed of 2-inch diameter, schedule 40 PVC solid well pipe riser and 10-slot screen, positioned to intercept the water table. The annular space around each well screen was backfilled with #0 filter sand and sealed with bentonite chips. Each well was finished with a stick-up protective cover. Well construction logs can be found in **Appendix B**.

Methods of Development

HRP mobilized to the Site on June 12, 2023, to develop the newly installed monitoring wells. HRP developed the wells using a submersible "Whale" pump and dedicated high-density polyethylene tubing to pump and surge the water column. Water quality field parameters including temperature, pH, dissolved oxygen, oxygen reduction potential, and conductivity were recorded during the development of each well. Pumping and surging was continued at each well until water quality parameters (other than turbidity) stabilized through three consecutive readings within 10% and turbidity was reduced below 50 nephelometric turbidity units (NTU). Due to poor recovery at monitoring well MW-1, a bailer was used to surge the water column and a peristaltic pump was used to purge. Non-disposable equipment was decontaminated prior to use in and between each well. Care was taken not to introduce contaminants to the equipment during well development. All development waters were emptied into a clean 5-gallon pail for approximate volume measurement and were then transferred to a 55-gallon steel drum for future off-site disposal. Well development logs including water quality field parameters, depth to water measurements and purge volumes can be found in **Appendix B**.

Temporary Well

On June 13, 2023, a temporary overburden monitoring well (TW-1) was installed at soil boring location SB-5. The monitoring well was constructed of 1-inch diameter, schedule 40 PVC solid well pipe riser, 10-slot screen, and was positioned to intercept the water table.

On June 13, 2023, a grab groundwater sample from the sump within the Outbuilding basement was collected. The sump was approximately 1 foot by 1 foot and contained stagnant water. The sump was built into the concrete slab of the basement floor and located in the southwest corner of the Outbuilding basement.

Sampling Methods and Procedures

Groundwater wells were sampled in general accordance with Environmental Protection Agency (EPA) low-flow techniques as described in the Site-specific QAPP. Monitoring well sampling data was recorded in a groundwater sampling data sheet and are provided in **Appendix B**.

To evaluate the groundwater quality beneath the Site, groundwater samples were collected from each of the monitoring wells (MW-1, MW-2, MW-3, and TW-1) as well as the sump located in the Outbuilding. Groundwater analytics are summarized in **Table 1**.

3.4 Site Survey

On June 13, 2023, a top of casing relative elevation survey was conducted for the purpose of preparing a groundwater contour map and determining groundwater flow direction. Top of casing elevations were surveyed relative to an arbitrary benchmark assigned an elevation of 100 feet.

3.5 Deviations from QAPP

During the Phase II ESA, deviations from the work plan were as follows:

- The hand boring proposed inside the Outbuilding could not be installed due to safety issues entering the building basement with the coring machine. A water sample was collected from the sump in the basement to characterize the location.

- During the monitoring well sampling event, MW-1 was purged dry before water quality field parameters could be stabilized. A groundwater sample was collected from the well immediately after sufficient recharge was achieved.

- A total of nine soil borings were installed and sampled from instead of the original 13 borings proposed. The number of borings was decreased due to a lack of impacts observed in the soil borings as they were installed.

- Temporary wells TW-1 and TW-2 were not installed near UST 1 as the UST was not identified by the GPR survey. Temporary well TW-1 was instead installed to the west of the Former Coal House Footprint due to observed impacts to soil.

4.0 NATURE AND EXTENT OF CONTAMINATION

To identify the nature and extent of contamination at the Site, HRP submitted soil and groundwater samples to Hampton-Clarke, Inc. a NYSDOH ELAP-certified laboratory for analysis of VOCs, SVOCs, PAHs 1,4-dioxane, PCBs, pesticides, herbicides, and metals (including mercury), and PFAS. Soil and groundwater samples analyzed for PFAS were submitted to Eurofins TestAmerica Laboratory (Eurofins), a NYSDOH ELAP-certified laboratory. Laboratory analytical reports are included in **Appendix C**. A NYSDEC-approved data validator, Analytical Quality Associates, provided data validation services for this project. Data qualifiers and their definitions are included in **Appendix D**. The presentation of results within this text does not include data qualifiers. Detected chemical compounds in the various media sampled as part of the Phase II ESA and the analytical results are presented in **Tables 2** through **4**. A general description of the various media sampled and analyzed is provided below.

Compounds detected in the various media tested during this SC were compared to the following New York State standards, criteria, and guidance values (SCGs):

- NYSDEC Division of Water Technical and Operational Guidance Series (TOGS 1.1.1); Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations dated October 1993; Revised June 1998; ERRATA Sheet dated January 1999; and Addendum dated April 2000.

- NYSDEC Regulation, 6 NYCRR Subpart 375-6, "Remedial Program Soil Cleanup Objectives" which applies to the development and implementation of the remedial programs for soil and other media set forth in subparts 375-2 through 375-4 [Inactive Hazardous Waste Disposal Site Remedial Program, Brownfield Cleanup Program, and Environmental Restoration Program] and includes the soil cleanup objective tables developed pursuant to ECL 27-1415(6).

  To be consistent with the current and future use as a commercial/industrial use property, soil analytical results for this investigation were compared against NYSDEC 6 NYCRR Part 375-6 Unrestricted Use (UU), Restricted Residential Use (RRU) Commercial Use (CU), Industrial Use (IU) Soil Cleanup Objectives (SCOs).

- Guidance values for soil contained in NYSDEC guidance document "Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) under NYSDEC's Part 375 Remedial Programs", dated February 2023 (NYSDEC guidance values).

- New York State Ambient Water Quality Guidance Values (Class GA), for 1,4-dioxane, perfluorooctane sulfonic acid (PFOS), and perfluorooctanoic acid (PFOA) as proposed in the 2021 Addendum to TOGS 1.1.1.

4.1 GPR Findings

During the GPR survey a tunnel was detected running between the small Outbuilding and Textile Manufacturing Building, and its detected edges were marked with pink paint. The entrance to the tunnel from the Outbuilding was sealed, and its entrance from the Textile Manufacturing Building was not found (during the investigation). The detected tunnel's width was measured at approximately 12 ft. Water and sanitary sewer were detected exiting the Textile Manufacturing Building from the southeast corner, and running south to West Liberty Street. Both were detected at depths of 4 to 4.5 ft bg and marked with blue (water) and green (sewer) paints and flags. Gas was detected entering the property from the south side at a depth of 3 ft bg, and running north towards the overgrown vegetation area at the west side of the Textile Manufacturing Building. It could not be confirmed where this line runs in the overgrown vegetation area, due to inaccessibility. The utility room where gas enters the Textile Manufacturing Building was observed at the west side of the building. The detected line was marked with yellow paint and flags

The two USTs identified during the Phase I ESA with unknown locations were specifically searched for utilizing the GPR survey. Neither UST was located during the survey.

4.2 Soils

Observations

Soil observations were generally consistent throughout the Site. Fill materials were observed in each of the soil borings and included ash, cinders, brick, and metal slag. Fill materials were generally observed in a sand or silty sand matrix which included medium to fine gravel. Native soils consisting of clay were observed at depths from 15 to 20 ft bg of each boring, with the exception of SB-8 which was completed at 4 ft bg upon drill rig refusal.

Obvious indications of contamination (e.g., staining, odors) were not observed in soil samples with the exception of SB-6. Odors and staining were observed at the approximate depth of the water table in boring SB-6. Maximum PID readings were detected at concentrations of 84.4 ppm. Odors and elevated PID readings were not detected in any of the other soil borings. Soil boring logs are included in **Appendix B.**

Analytical results

AOC 1 – Garage Area

A total of four soil samples were collected from two hand borings (HB-1 and HB-2) and from two soil borings (SB-1 and SB-2) to characterize soils beneath the Garage Area and in the general vicinity of the Garage Area. Soil sample analytics are summarized on **Table 1**.

VOCs, SVOCs, PCBs, and herbicides were not detected at concentrations exceeding SCGs in any of the four soil samples collected. Detected analytical compounds are presented on **Table 2**.

Pesticides, including 4,4'-DDD and 4,4'-DDT were detected at concentrations exceeding UU SCOs (but below IU and CU SCOs) in the soil sample collected from HB-1. Pesticide analytical results for soil samples are presented on **Table 2.**

Metals including copper, lead, and selenium were detected at concentrations exceeding UU SCOs in the soil sample collected from HB-1. Mercury was detected at concentrations exceeding UU SCOs in soil samples collected from HB-1 and SB-2. Lead and mercury were detected at concentrations exceeding RRU SCOs in the soil sample collected from HB-2. Arsenic was detected at a concentration exceeding IU SCOs in soil sampled collected from HB-1 and HB-2. Metals results for soil samples are presented on **Table 2**.

AOC 2 – Textile Manufacturing Area

A total of two soil samples were collected from one hand boring (HB-3) and from one soil boring (SB-9) to characterize soils beneath the Textile Manufacturing Area and in the general vicinity of the Textile Manufacturing Area. Soil sample analytics are summarized on **Table 1**.

VOCs, SVOCs, PCBs, herbicides, and pesticides were not detected at concentrations exceeding SCGs in any of the four soil samples collected. Detected analytical compounds are presented on **Table 2**.

Metals including copper, lead, and selenium were detected at concentrations exceeding UU SCOs in the soil sample collected from HB-3. Mercury was detected at a concentration exceeding RRU SCOs in soil sample collected from HB-3. Arsenic was detected at a concentration exceeding IU SCOs in soil sampled collected from HB-3. Metals analytical results for soil samples are presented in **Table 2**.

AOC 3 – Automotive Storage House 2

A total of two soil samples were collected from two soil borings (SB-8 and SB-9) to characterize soils in the general vicinity of the Automotive Storage House 2. Soil sample analytics are summarized on **Table 1**.

VOCs, SVOCs, PCBs, herbicides, and pesticides were not detected at concentrations exceeding SCGs in any of the two soil samples collected. Detected analytical compounds are presented on **Table 2**.

Metals including lead and mercury were detected at concentrations exceeding UU SCOs in the soil sample collected from SB-8. Metals analytical results for soil samples are presented in **Table 2**.

AOC 4 – Automotive Storage House 1

A total of one soil sample was collected from one soil boring (SB-7) to characterize soils in the general vicinity of the Automotive Storage House 2. Soil sample analytics are summarized on **Table 1**.

VOCs, SVOCs, PCBs, herbicides, and pesticides were not detected at concentrations exceeding SCGs in the soil sample collected. Detected analytical compounds are presented on **Table 2**.

The metal compound copper was detected at a concentration exceeding UU SCOs in the soil sample collected from SB-7. Metals analytical results for soil samples are presented in **Table 2**.

AOC 5 – Former Coal House

A total of three soil samples were collected from three soil borings (SB-3, SB-4, and SB-5) to characterize soils in the general vicinity of the Former Coal House. Soil sample analytics are summarized on **Table 1**.

VOCs, PCBs, pesticides, and herbicides were not detected at concentrations exceeding SCGs in any of the four soil samples collected. Detected analytical compounds are presented on **Table 2**.

The metal compound mercury was detected at a concentration exceeding UU SCOs in the soil sample collected from SB-3. Metals analytical results for soil samples are presented in **Table 2**.

The SVOC compound chrysene was detected at a concentration exceeding UU SCOs in the soil sample collected from SB-5. SVOCs including benzo(a)anthracene, benzo(b)fluoranthene, and indeno(1,2,3-cd)pyrene were detected at concentrations exceeding RRU SCOs in the soil sample collected from SB-5. The SVOC compound benzo(a)pyrene was detected at a concentration exceeding IU SCOs in the soils sample collected form SB-5. SVOC analytical results for soil samples are presented on **Table 2**.

AOC 6 - Outbuilding

A total of one soil sample was collected from one soil boring (SB-6) to characterize soils in the general vicinity of the Outbuilding. Soil sample analytics are summarized on **Table 1**.

VOCs, SVOCs, metals, PCBs, herbicides, and pesticides were not detected at concentrations exceeding SCGs in any of the two soil samples collected. Detected analytical compounds are presented on **Table 2**.

4.3 Groundwater

Observations

On June 13, 2023, a grab groundwater sample was collected from temporary monitoring well TW-1 and from the Outbuilding sump. It was observed that the grab groundwater sample collected from temporary monitoring well TW-1, was excessively turbid during sample collection. During the low-flow sampling event conducted on June 22, 2023, groundwater samples were collected from monitoring wells MW-1, MW-2, and MW-3. No impacts to groundwater (e.g., odors, sheens) were observed during the low-flow sampling event. Groundwater monitoring logs are presented in **Appendix B**.

Analytical Results

Grab Groundwater Samples

A total of two grab groundwater samples were collected from the temporary well, TW-1, and from the Outbuilding sump and analyzed as described above for PAHs and VOCs.

VOCs were not detected at concentrations exceeding NYSDEC Class GA Criteria in either grab groundwater sample. The PAH benzo(b)fluoranthene was detected at a concentration of 2.0 μg/L which exceeds the NYSDEC Class GA Criteria. Sample results are presented in **Table 3**.

Monitoring Well Groundwater Samples

A total of three groundwater samples were collected from monitoring wells MW-1 through MW-3 and analyzed as described above. Sample results are presented below, on **Table 4**.

VOCs, SVOCs, PCBs, pesticides, and herbicides were not detected exceeding NYSDEC Class GA Criteria in the three samples collected. Detected analytical compounds for groundwater samples are presented on **Table 4**.

The metal compound manganese was detected at a concentration exceeding the NYSDEC Class GA Criteria in the groundwater sample collected form monitoring well MW-2. Metals analytical results for groundwater samples are presented on **Table 4**.

PFOS was detected at concentrations exceeding proposed NYSDEC Class GA Criteria in two of the three groundwater samples. The PFAS analytical results for the groundwater samples are presented on **Table 4**.

4.4 Data Validation and Usability

Analytical data obtained during the Phase II ESA were validated to evaluate the usability of the data. Data Usability Summary Reports (DUSRs) are provided in **Appendix D**. The DUSRs indicate which data are subject to limitations and identify certain data that are flagged as rejected and should not be used.

All data that are not qualified rejected, unusable (R) are considered usable, with estimated (J, J-, or UJ) data associated with a higher level of quantitative uncertainty. Based on our review of the DUSRs, the rejected and qualified data does not limit HRP's evaluation of the Site. Detailed information on data quality is included in the DUSR and included as **Appendix D**.

5.0 CONCLUSIONS

The goal of Phase II ESA is to determine if:

- Environmental impacts are present on the Site; and
- Contaminants of concern (identified in the Site-Specific QAPP) are present in soil and groundwater at concentrations which contravene applicable New York State standards, criteria, and guidance values (SCGs).

And additionally:

- To what extent do identified environmental impacts limit the future use of the Site?
- How do environmental impacts effect redevelopment costs associated with various potential uses for the Site?

The information collected during this investigation leads HRP to draw the following conclusions:

5.1 Site Soils

- Two types of distinguishable imported fill are present at the Site. One type of fill is beneath the Garage Area and Textile Manufacturing Building and another type of fill is present across the rest of the Site.
- Metals and pesticides detected in surface soils beneath the Garage Area and the Textile Manufacturing Area at concentrations exceeding SCGs can generally be attributed to historic fill likely associated with the construction of the buildings on-site. Analytical results from soil samples collected across the Site indicate impacts are generally limited to fill material located beneath the garage area and the textile manufacturing building.

- Subsurface soils across the Site do not appear to be grossly impacted by contaminants of concern. One location, soil boring SB-5, contained concentrations of SVOCs that exceeded SCGs, however SVOCs were not identified at the same concentrations from other locations at the Site. The SVOCs appear to be localized to this location.
- Based on concentrations of contaminants identified in surface soil, potential future use of the Site is limited by the concentrations exceeding SCGs. Current Site conditions contain soils that contain metals contamination that are capped by the concrete slab of the garage area. The textile manufacturing building does not have a concrete slab and the contaminated soil is exposed.

5.2 Groundwater

- PAHs were detected in the grab groundwater sample collected from temporary well TW-1 at concentrations exceeding SCGs.
- Groundwater samples collected from the monitoring wells and the Outbuilding sump contained no concentrations exceeding any SCGs.
- Groundwater at the Site does not appear to be impacted by any contaminants of concern.
- The detected concentrations are not indicative of a widespread groundwater issue and are unlikely to restrict redevelopment of the Site based on the planned continued use of the municipal drinking water supply.

6.0 RECOMMENDATIONS

Suspect asbestos containing materials (ACM) (including pipe wrap, vinyl floor tile, window glazing compound, and dry wall) were observed inside or along the exterior of the manufacturing building. An asbestos survey should be conducted to determine if ACM are present within the Site building.

SVOCs and metals are present on-site at concentrations exceeding Restricted Residential Use Soil Cleanup Objectives in surface and subsurface soils. Additionally, SVOCs are present in Site groundwater at concentrations exceeding applicable Technical and Operational Guidance Series regulatory standards. Exposure pathways to sensitive receptors are limited under the current use of the Site, however, impacted soils should be managed to protect potential receptors during redevelopment and future use. Based on the data collected and the intended future use of the Site, it may be an appropriate path forward to redevelopment to enter the NYSDEC Brownfields Cleanup Program, the Environmental restoration program, or to manage Site soils in accordance with NYSDEC 6NYCRR Part 360.

Completed on:

June 12, 2023

INTRODUCTION

American Geophysics, Inc. (AGInc.), is a geophysical survey and investigation services firm which provides Environmental & Engineering Geophysics (EEG) services to the environmental consulting, construction, and engineering communities. Led by over 20 years of field experience, AGInc. takes pride in providing the highest training for our technicians and the use of the most current and state-of -the-art equipment. This winning combination of experience and technology results in the most accurate findings.

METHODOLOGY

Geophysical surveys are typically accomplished by employing the following techniques; Ground-penetrating Radar (GPR), electromagnetic metal detector (Fisher TW6), radio frequency line locating (RF), Electromagnetic Profiler (EM). Underground storage tanks (USTs), utilities, and metallic anomalies are typically traced and mapped with RF, GPR, EM, and a magnetometer depending on the size, matrix and conductive properties of the targets. Site conditions and client specifications of the areas of concern (AOCs), determine the survey approach and equipment used to provide the most comprehensive data possible.

EQUIPMENT USED:

Radiodetection RD1100 250MHz ground penetrating radar (GPR)

Radiodetection RD8000 PDL pipe and cable locator

Fisher TW6 Magnetometer

SCOPE OF WORK

On June 12th, 2023, a geophysical survey and investigation was performed and completed at the above mentioned location. The scope of work was to identify subsurface utilities as well as any unknown anomalies around the client-directed boring locations. The surface conditions consisted of asphalt, concrete, gravel, and bare soils. The locations were investigated using the RD1100 250MHz (GPR), the Fisher TW6 Magnetometer, and the RD8000 pipe/cable locator.

SURVEY RESULTS

All the equipment was used in an octagonal-grid pattern over each of the AOCs. 3D data was collected and 2D locations were logged. The RD 8000 was also used in many different modes, directly and passively. All neighboring utility access points, as well as all pipes/conduits going in or out of the ground were directly induced. Please note that all depths are estimated below ground surface (BGS). The best possible data points were collected and all findings are estimated and dependent upon soil types/conditions, weather conditions and the dielectric properties of the subsurface during the time of the investigation. All findings were discussed with the client and marked on site in APWA color-coded paints and flags. All unknown subsurface anomalies were painted pink.

LISTED SURVEY RESULTS:

1. A total of 10 potential/proposed boring locations were investigated.
2. An area consistent with prior excavation/previous building foundation was detected at the west side of the property. One of the area's dimensions was ~12 feet, and the other(s) is unknown, due to overgrown vegetation limiting GPR access for perpendicular transects over the area. The area had a metallic response when investigated with the TW6, but GPR imaging is not consistent with that of an underground storage tank (UST) .
3. A tunnel was detected running between the small west building and the main property building, and its detected edges were marked with pink paint. The entrance to the tunnel from the small building was sealed, and its entrance from the main building was not found (during the investigation). The detected tunnel's width was measured at approximately 12 ft.
4. An unknown linear anomaly was detected running along the north side of the property, near two of the client's proposed boring locations. This anomaly was detected at depths of ~(3 to 6 feet - due to elevation change), and marked with pink paint and flags. The client's locations were moved accordingly.
5. Water and sanitary sewer were detected exiting the main building from the southeast corner, and running south to West Liberty Street. Both were detected at depths of ~(4 to 4.5 ft) below ground surface (BGS), and marked with blue (water) and green (sewer) paints and flags.
6. An unknown linear anomaly was detected running parallel to the water and sewer lines, into the southeast corner of the property. This anomaly was detected at depths of ~(4 to 5 ft) BGS, and was marked with pink paint and flags as it could not be confirmed.
7. Gas was detected entering the property from the south side at a depth of ~3 ft BGS, and running north towards the overgrown vegetation area at the west side of the main building. It could not be confirmed where this line runs in the overgrown vegetation area, due to inaccessibility. The utility room where gas enters the building was observed at the west side of the building. The detected line was marked with yellow paint and flags.

8. Two unknown linear anomalies were detected entering the property from the southwest driveway, and running north towards the smaller building at the west side of the property. The overgrown vegetation between the smaller building and the south property fence prevented further investigation of these linear anomalies. These anomalies were detected running side by side;
    - The linear anomaly to the west was detected at depths of ~(3.5 to 5 ft), from north to south respectively.
    - The linear anomaly to the east was detected at a depth of ~3 ft.
    - Both anomalies were marked with pink paint.
9. Overgrown vegetation limited investigation to many areas of the property. Please see the diagram provided below.
10. GPR transects and RD8000 passive sweeps were conducted around the entirety of the accessible property, in a grid-like pattern.
11. All findings were discussed with the client and marked on site in APWA color-coded paints. The best possible data points were marked, recorded and all findings were discussed with the client on-site. Please see the sample figures/images below.

LIMITATIONS

Areas within ~3 feet of any wall and/or any other vertical obstruction can not be fully investigated and confirmed due to the physical inability to get the center of any GPR antenna flush to the wall. Subsurface congestion can lead to coupling. This also can lead to distortion, attenuation, "bleed-off" and sympathetic signals. Due to surface conditions and the dielectric properties of the subsurface and properties of concrete, plastic polymer, and fiberglass, not all subsurface anomalies and utilities may have been detected. Buildings, concrete barriers, wet soils, saturated conditions, cracked surfaces, curb lines, and metal structures may have affected survey results near and immediately beneath them.

GPR signal penetration depth during survey/investigation:

Good and estimated to be ~(7 - 8 ft) below ground surface (BGS)

Listed Limitations:

1. Overgrown vegetation limited investigation to many areas of the property.
2. Lack of/inaccessible utility access points.
3. Cut/Abandoned utilities.
4. Non-Conductive Materials.

Figures

Fig. 1: Images of the area consistent with prior excavation detected at the west side of the property.

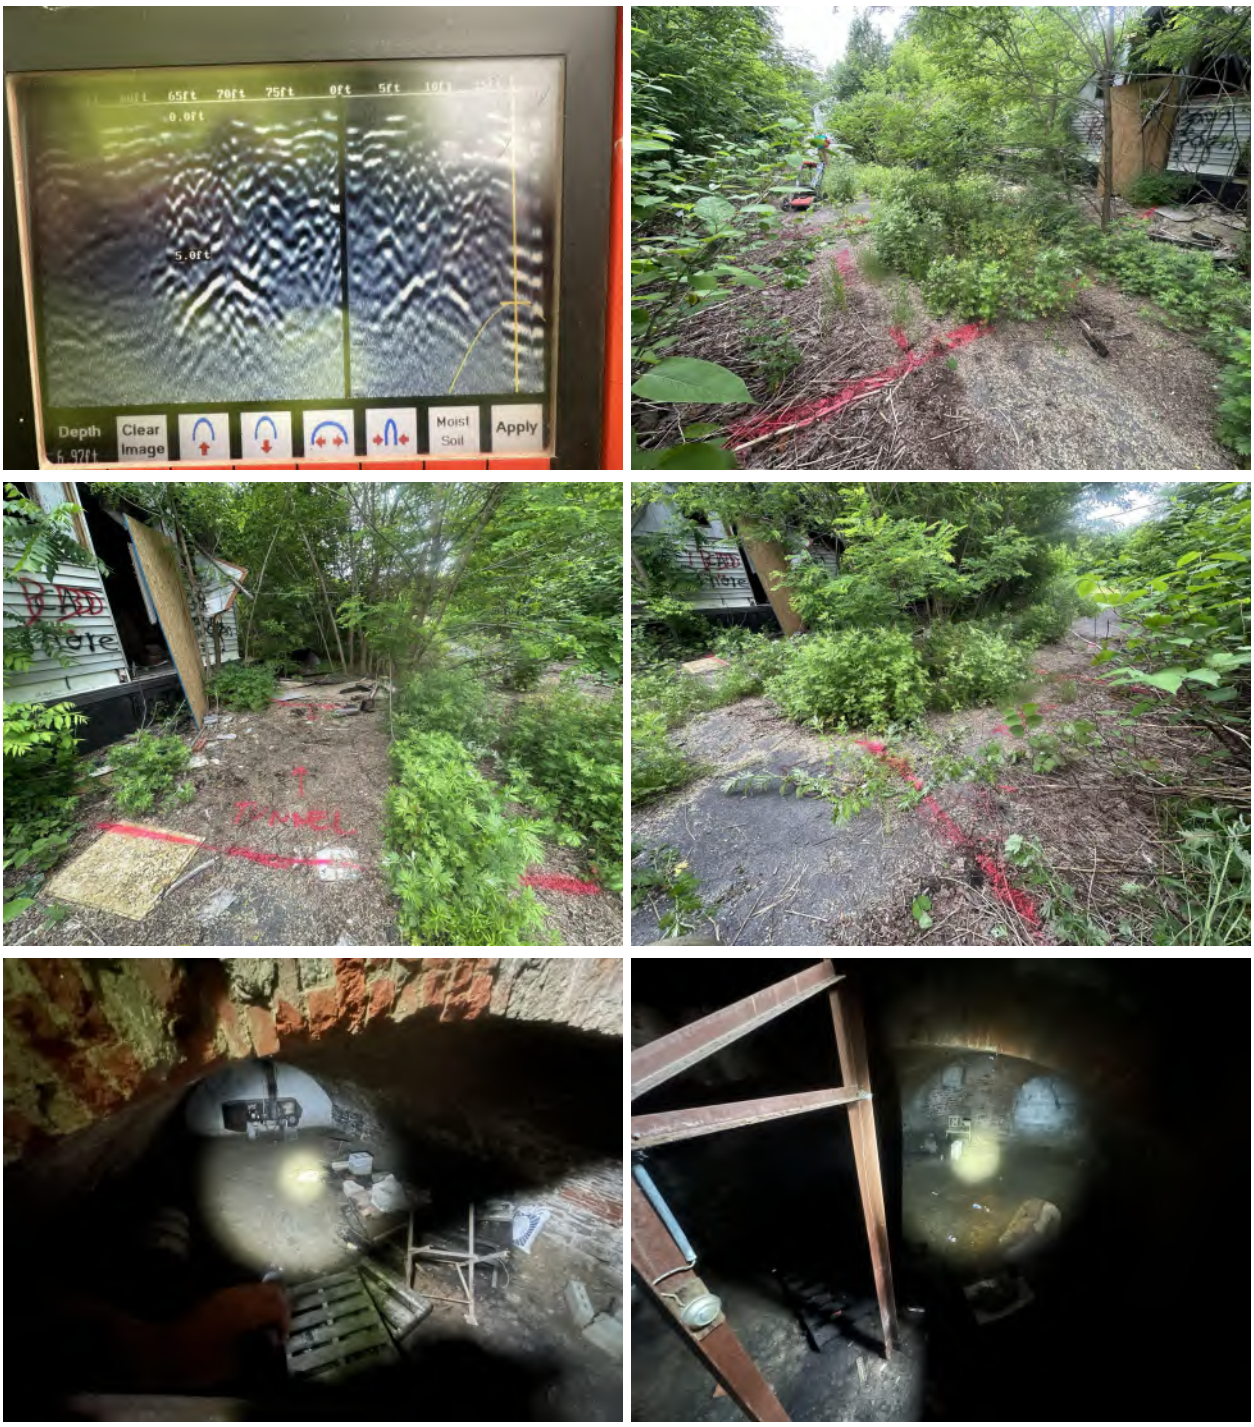

Fig. 2: Images of the tunnel detected, as well as the small building basement investigated, where the tunnel entrance was observed to be sealed.

Fig. 3: Images of the linear anomaly running along the north side of the property.

Fig. 4: Images of the linear anomalies detected at the southwest side of the property.

Fig. 5: Images of the gas, water, and sewer for the main building; as well as the unconfirmed utility/unknown linear anomaly that was detected at the southeast side of the property - near the water and sewer.

***All field services were conducted in compliance with the industry standard of care guidelines found in ASCE 38-02 (Level B) and marked in appropriate colors as per the APWA (American Public Works Association).**

American Geophysics Inc. | 180 Main Street Butler, New Jersey 07405 | 833.SCAN GPR/ 833.722.6477

WARRANTIES

· ***American Geophysics, Inc. does not guarantee that utilities, conduit, and steel reinforcement will be avoided during drilling, cutting, trenching, and coring.***

· ***All utility designating will be in compliance with ASCE 38-02 (level B).***

· ***All field services were conducted in compliance with the industry standard of care guidelines found in CSDA-BP-007 and marked in appropriate colors as per the APWA (American Public Works Association).***

· ***The GPR unit must have direct contact with the concrete in order to collect quality data.***

· ***Any areas covered with debris cannot be scanned correctly with GPR.***

· ***Wet floors will not allow proper marking with paint and/or permanent marker.***

· ***All concrete slabs must be monolithic pours.***

· ***Dairy brick and some types of tile may cause signal interference.***

· ***New concrete can adversely affect the signal penetration and should be given a minimum of one month curing time.***

· ***All areas should be clear for scanning and marking.***

The field observations and measurements reported herein are considered sufficient in detail and scope for this project. American Geophysics, Inc. warrants that the findings and conclusions contained herein have been promulgated in accordance with generally accepted geophysical methods. There is a possibility that conditions may exist which could not be identified within the scope of this project and were not apparent during the site activities performed for this project.

American Geophysics, Inc. represents that the services were performed in a manner consistent with that level of care and skill ordinarily exercised by geophysical consultants under similar circumstances. No other representations to Client, express or implied, and

no warranty or guarantee is included or intended in this agreement, or in any report, document, or otherwise.

American Geophysics, Inc. believes that the information provided in this report is reliable. However, American Geophysics, Inc. cannot warrant or guarantee that the information provided by others is complete or accurate. No other warranties or guarantees are implied or expressed.

GPR data is subject to signal anomalies and operator interpretation. The GPR data is intended to provide the locations of areas of concern requiring additional investigation or the approximate location of underground structures and utilities. Great care must be utilized when excavating, drilling, and cutting around subsurface structures and utilities, since GPR data can only be used for estimation purposes and GPR data, is subject to misinterpretation. American Geophysics, Inc. cannot guarantee that utilities, post-tension cables, and/or rebar will not be incurred during drilling, cutting, coring, and excavation activities.

Hand clearing or vacuum-excavation should be performed within 3 feet of any marks. American Geophysics, Inc. does not guarantee that utilities will not be encountered during drilling and/or excavation. Mark-out services performed by American Geophysics, Inc. do not satisfy state mark out requirements. By law, the appropriate state mark-out service must be notified prior to any digging activities (i.e. NJ one-call, PA one-call, CT call before you dig, MD & VA miss utility, dig safely NY, FL one-call, 811 one-call, call before you dig, Sunshine State One-Call).

This report was prepared pursuant to the contract American Geophysics, Inc. has with the Client. That contractual relationship included an exchange of information about the property that was unique between American Geophysics, Inc. and its client and serves as the basis upon which this report was prepared. Because of the importance of the communication between American Geophysics, Inc. and its client, reliance or any use of this report by anyone other than the Client, for whom it was prepared, is prohibited and therefore not foreseeable to American Geophysics, Inc.

Reliance or use by any such third party without explicit authorization in the report does not make said third party a third-party beneficiary to American Geophysics, Inc. contract with the Client. Any such unauthorized reliance on or use of this report, including any of its information or conclusions, will be at the third party's risk. For the same reasons, no warranties or representations, expressed or implied in this report, are made to any such third party.

This case narrative is in the form of an exception report. Method specific and/or QA/QC anomalies related to this report only are detailed below.

Volatile Organic Analysis:

Methylene chloride was recovered in samples AD38537-001, -003, -005, -008 due to possible laboratory contamination.

The Method Blank Spike for batches 109403, 109413 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries. Please refer to Form 4 to see which samples are associated with the Method Blank Spike.

The MSD RPD, Matrix Spike and/or Matrix Spike Duplicate for batches 109403, 109413 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

2-Chloroethylvinylether did not recover in the Matrix Spike and Matrix Spike Duplicate in batches 109403, 109413 due to acid preservation of sample. 2-Chloroethylvinylether readily decomposes under acidic conditions. The recovery of 2-Chloroethylvinylether is within QC limits in the Laboratory Control Sample. Please refer to the applicable Form 3 for the recoveries.

Base Neutral/Acid Extractable Analysis:

The Matrix Spike and/or Matrix Spike Duplicate for batch 108867 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

Metals Analysis:

The Matrix Spike and/or Matrix Spike Duplicate for batch 107860 had recoveries outside QC limits. Please refer to the applicable Form 5/7 for the recoveries.

QC sample AD38537-001 was reported at a dilution for Mn due to concentration over linear range.

Wet Chemistry Analysis:

Data conforms to method requirements.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Sean Berls Quality Assurance Officer	Or	Jean Revolus Laboratory Director	7/18/23 Date

Reporting Limit Definitions

HC Reporting Limit Definitions/Data Qualifiers

REPORTING DEFINITIONS

DF = Dilution Factor

DUP = Duplicate

LCS = Laboratory Control Spike

MBS = Method Blank Spike

MDL = Method Detection Limit

MR = Matrix Replicate

MS = Matrix Spike

MSD = Matrix Spike Duplicate

NA = Not Applicable

ND = Not Detected

PS = Post Digestion Spike

RL* = Reporting Limit

RT = Retention Time

SD = Serial Dilution

**Samples with elevated Reporting Limits (RLs) as a result of a dilution may not achieve client reporting limits in some cases. The elevated RLs are unavoidable consequences of sample dilution required to quantitate target analytes that exceed the calibration range of the instrument.*

DATA QUALIFIERS

A- Indicates that the Tentatively Identified Compound (TIC) is suspected to be an aldol-condensation product. These compounds are by-products of acetone and methylene chloride used in the extraction process.

B- Indicates analyte was present in the Method Blank and sample.

d- For Pesticide and PCB analysis, the concentration between primary and secondary columns is greater than 40%. The lower concentration is generally reported.

E- Indicates the concentration exceeded the upper calibration range of the instrument.

J- Indicates the value is estimated because it is either a Tentatively Identified Compound (TIC) or the reported concentration is greater than the MDL but less than the RL. For samples results between the MDL and RL there is a possibility of false positives or misidentification at the quantitation levels. Additionally, the acceptance criteria for QC samples may not be met.

R- Retention Time is out.

Y- Indicates a contaminant found in the blank at less than 10% of the concentration of a contaminant found in the sample.

Total Target Concentration 0.01

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Worksheet #: 696126

Total Target Concentration 0.44

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

11) Sampler (print name): Patrick Montuori Date: 6-12-23

Additional Notes

Comments, Notes, Special Requirements, HAZARDS

Indicate if low-level methods required to meet current groundwater standards (SPLP for soil):
- [ ] BN or BNA (8270E SIM)
- [ ] VOC (8260D SIM or 8011)
- [ ] SPLP (BN, BNA, Metals)
- [ ] 1,4 Dioxane

For NJ LSRP projects, indicate which standards need to be met:
- [ ] NJDEP GWQS
- [ ] NJDEP SRS
- [ ] NJDEP SPLP
- [ ] Other (specify):

Check if applicable:
- [ ] Project-Specific Reporting Limits
- [ ] High Contaminant Concentrations
- [ ] NJ LSRP Project (also check boxes above/right)

Cooler Temperature: 2.7

Please note NUMBERED items. If not completed your analytical work may be delayed.
A fee of $5/sample will be assessed for storage should sample not be activated for any analysis.

Internal use: sampling plan (check box) HC [ ] or client [ ] FSP#

CONDITION UPON RECEIPT

Batch Number AD38537 Entered By: maxwell

Date Entered 6/13/2023 11:55:00 AM

1	Yes	Is there a corresponding COC included with the samples?
2	Yes	Are the samples in a container such as a cooler or Ice chest?
3	Yes	Are the COC seals intact?
4	T-461	<--- Thermometer ID. Please specify the Temperature inside the container (in degC). 2.7
5	Yes	Are the samples refrigerated (where required)/have they arrived on ice?
6	Yes	Are the samples within the holding times for the parameters listed on the COC? IF no, list parameters and samples:
7	Yes	Are all of the sample bottles intact? If no, specify sample numbers broken/leaking
8	Yes	Are all of the sample labels or numbers legible? If no specify:
9	Yes	Do the contents match the COC? If no, specify
10	Yes	Is there enough sample sent for the analyses listed on the COC? If no, specify:
11	Yes	Are samples preserved correctly?
12	Yes	Was temperature blank present (Place comment below if not)? If not was temperature of samples verified?
13	NA	Other comments ...Specify (TB date, sample matrix, any missing info, etc.)
14	NA	Corrective actions (Specify item number and corrective action taken).
15	NA	Were any samples for ortho-phosphate or dissolved ferrous iron field filtered?

Worksheet #: 696062

Total Target Concentration 0.01

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Worksheet #: 696057

Total Target Concentration 0.046

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Worksheet #: 696057

Total Target Concentration 0.039

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

A - Indicates an aldol condensate.
J - Indicates an estimated value.
B - Indicates the analyte was found in the blank as well as in the sample.
Y - Indicates the analyte was found in the blank at <10% of the concentration of the sample.
<10% - Indicates the analyte was found in the blank at < 10% of nearest Internal Standard

Worksheet #: 696057

Total Target Concentration 0.007

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used

Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 9.174

Corr 1 = Correlation Coefficient for linear Eq.

Corr 2 = Correlation Coefficient for quad Eq.

Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Form 6
Initial Calibration

Method: EPA 8260D

Instrument: GCMS_1

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Avg Rsd: 9.174

Note:

Corr 1 = Correlation Coefficient for linear Eq.

Corr 2 = Correlation Coefficient for quad Eq.

Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Method: EPA 8260D

Form 6
Initial Calibration

C1-Compound %Diff exceeds limits

** - No limit specified in method

Note: 8260/8270 limits are compared against the %DIFF/R.F.
624 limits are compared against the concentration found.

625 limits are compared against the %DIFF.
524.2 limits are compared against the %DIFF

Worksheet #: 696057

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Worksheet #: 696057

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Total Tentatively Identified Concentration 0

A - Indicates an aldol condensate.
J - Indicates an estimated value.
B - Indicates the analyte was found in the blank as well as in the sample.
Y - Indicates the analyte was found in the blank at <10% of the concentration of the sample.
<10% - Indicates the analyte was found in the blank at < 10% of nearest Internal Standard

Worksheet #: 696126

Total Target Concentration 0.44

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Worksheet #: 696126

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Worksheet #: 696126 ***Total Target Concentration*** 7.5 ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Flags	*Note:* Avg Rsd: 6.69
a - failed the min rf criteria	*Corr 1 = Correlation Coefficient for linear Eq.*
c - failed the minimum correlation coeff criteria(if applicable)	*Corr 2 = Correlation Coefficient for quad Eq.*
	Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Avg Rsd: 6.69

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note:

Corr 1 = Correlation Coefficient for linear Eq.

Corr 2 = Correlation Coefficient for quad Eq.

Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Method: EPA 8270E

Form 6
Initial Calibration

Instrument: GCMS_7

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 9.769

Corr 1 = Correlation Coefficient for linear Eq.

Corr 2 = Correlation Coefficient for quad Eq.

Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Method: EPA 8270E

Form 6
Initial Calibration

Instrument: GCMS_9

Avg Rsd: 9.769

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note:

Corr 1 = Correlation Coefficient for linear Eq.

Corr 2 = Correlation Coefficient for quad Eq.

Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Worksheet #: 696126

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Notes: a-indicates absolute value of the concentration > 2 * Reporting Limits In the ICSA
b-indicates absolute value of the concentration above Reporting Limits but < 2 * Reporting Limits in the ICSA
c-indicates the recovery failed the Qc Criteria in the ICSAB
u-indicates the absolute value of the concentration was below the reporting limit

Qc Limits: 200.7, 6020B < 2 * Reporting Limit
6010D < Reporting Limit

b-29845 Report Pb for 38519-001.
B-29848 Report TAL. LRS fail for Ag. Ag LR = 100ppb.
Reran 38537-001+QC for Mn (LR) QC only, Reran 38540-014 for Ca (LR).
B-29849 Report Ba for 38530-017. PC.

Note: ICP-MS dilution factor column does not reflect dilution which is performed prior to analysis. Secondary analytical dilution is documented on prep log. Dilution Factor: 2x 6/14/23

Standard/Batch/SnCl2 Lot #:

This case narrative is in the form of an exception report. Method specific and/or QA/QC anomalies related to this report only are detailed below.

Volatile Organic Analysis:

Acetone was recovered in sample AD38586-006 due to possible laboratory contamination.

The Method Blank Spike for batch 110001 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries. Please refer to Form 4 to see which samples are associated with the Method Blank Spike.

The MS/MSD RPD, Matrix Spike and/or Matrix Spike Duplicate for batch 110001 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The spiking compounds were diluted out from Matrix Spike and Matrix Spike Duplicate for batch 109429 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

Base Neutral/Acid Extractable Analysis:

The Method Blank Spike for batch 108840 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries. Please refer to Form 4 to see which samples are associated with the Method Blank Spike.

The MS/MSD RPD, Matrix Spike and/or Matrix Spike Duplicate for batch 108929 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

PCB Analysis:

Data conforms to method requirements.

Pesticide Analysis:

The Matrix Spike and/or Matrix Spike Duplicate for batch 108889 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

Herbicide Analysis:

Data conforms to method requirements.

Metals Analysis:

The Matrix Spike and/or Matrix Spike Duplicate for batch 107880 had recoveries outside QC limits. Please refer to the applicable Form 5/7 for the recoveries.

The RPD between the QC sample and the Method Replicate had recoveries outside QC limits in batch 107880. Please refer to the applicable Form 6/9 for the recoveries.

The MS/MSD RPD had recoveries outside QC limits in batch 107880. Please refer to the applicable Form 6/9 for the recoveries.

Sample AD38586-003 was reported at a dilution for As, Pb due to concentration over linear range.

Sample AD38586-004 was reported at a dilution for As, Fe due to concentration over linear range.

Wet Chemistry Analysis:

Data conforms to method requirements.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Sean Berls Quality Assurance Officer	Or	Jean Revolus Laboratory Director	7/20/23 Date

Reporting Limit Definitions

HC Reporting Limit Definitions/Data Qualifiers

REPORTING DEFINITIONS

DF = Dilution Factor

DUP = Duplicate

LCS = Laboratory Control Spike

MBS = Method Blank Spike

MDL = Method Detection Limit

MR = Matrix Replicate

MS = Matrix Spike

MSD = Matrix Spike Duplicate

NA = Not Applicable

ND = Not Detected

PS = Post Digestion Spike

RL* = Reporting Limit

RT = Retention Time

SD = Serial Dilution

**Samples with elevated Reporting Limits (RLs) as a result of a dilution may not achieve client reporting limits in some cases. The elevated RLs are unavoidable consequences of sample dilution required to quantitate target analytes that exceed the calibration range of the instrument.*

DATA QUALIFIERS

A- Indicates that the Tentatively Identified Compound (TIC) is suspected to be an aldol-condensation product. These compounds are by-products of acetone and methylene chloride used in the extraction process.

B- Indicates analyte was present in the Method Blank and sample.

d- For Pesticide and PCB analysis, the concentration between primary and secondary columns is greater than 40%. The lower concentration is generally reported.

E- Indicates the concentration exceeded the upper calibration range of the instrument.

J- Indicates the value is estimated because it is either a Tentatively Identified Compound (TIC) or the reported concentration is greater than the MDL but less than the RL. For samples results between the MDL and RL there is a possibility of false positives or misidentification at the quantitation levels. Additionally, the acceptance criteria for QC samples may not be met.

R- Retention Time is out.

Y- Indicates a contaminant found in the blank at less than 10% of the concentration of a contaminant found in the sample.

Worksheet #: 696297

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Worksheet #: 696297

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used

N-Nitrosodiphenylamine decomposes in the GC inlet and is detected as diphenylamine
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Worksheet #: 696338

Total Target Concentration 0.25

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Additional Notes

Comments, Notes, Special Requirements, HAZARDS

Indicate if low-level methods required to meet current groundwater standards (SPLP for soil):
- [ ] BN or BNA (8270E SIM)
- [ ] VOC (8260D SIM or 8011)
- [ ] SPLP (BN, BNA, Metals)
- [ ] 1,4 Dioxane

Check if applicable:
- [ ] Project-Specific Reporting Limits
- [ ] High Contaminant Concentrations
- [ ] NJ LSRP Project (also check boxes above/right)

For NJ LSRP projects, indicate which standards need to be met:
- [ ] NJDEP GWQS
- [ ] NJDEP SRS
- [ ] NJDEP SPLP
- [ ] Other (specify):

Cooler Temperature: 3.0

Please note NUMBERED items. If not completed your analytical work may be delayed.
A fee of $5/sample will be assessed for storage should sample not be activated for any analysis.

Internal use: sampling plan (check box) HC [ ] or client [ ] FSP#

CONDITION UPON RECEIPT

Batch Number AD38586 Entered By: ricardo

Date Entered 6/14/2023 4:45:00 PM

1	Yes	Is there a corresponding COC included with the samples?
2	Yes	Are the samples in a container such as a cooler or Ice chest?
3	Yes	Are the COC seals intact?
4	T-461	<--- Thermometer ID. Please specify the Temperature inside the container (in degC). 3.0
5	Yes	Are the samples refrigerated (where required)/have they arrived on ice?
6	Yes	Are the samples within the holding times for the parameters listed on the COC? IF no, list parameters and samples:
7	Yes	Are all of the sample bottles intact? If no, specify sample numbers broken/leaking
8	Yes	Are all of the sample labels or numbers legible? If no specify:
9	Yes	Do the contents match the COC? If no, specify
10	Yes	Is there enough sample sent for the analyses listed on the COC? If no, specify:
11	Yes	Are samples preserved correctly?
12	Yes	Was temperature blank present (Place comment below if not)? If not was temperature of samples verified?
13	Yes	Other comments ...Specify (TB date, sample matrix, any missing info, etc.) CLIENT SENT THEIR OWN PAH AND VO GW SAMPLES
14	NA	Corrective actions (Specify item number and corrective action taken).
15	NA	Were any samples for ortho-phosphate or dissolved ferrous iron field filtered?

Internal Standard Areas

Upper Limit = + 100% of internal standard area from daily cal or mid pt.

Lower Limit = - 50% of internal standard area from daily cal or mid pt.

Flags:

A - Indicates the compound failed the internal standard area criteria

R - Indicates the compound failed the internal standard retention time criteria.

Retention Times: Limit = within +/- 0.5 min of internal standard retention time from the daily cal or mid pt.

Worksheet #: 696297

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used.
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Worksheet #: 696297

Total Target Concentration 3.1

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Worksheet #: 696297 ***Total Target Concentration*** 3.3 ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 9.339

Corr 1 = Correlation Coefficient for linear Eq.

Corr 2 = Correlation Coefficient for quad Eq.

Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

3061429 0126

Method: EPA 8260D

Form 6
Initial Calibration

Instrument: GCMS_6

Flags
a - failed the min rf criteria
c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 9.339
Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 4.892

Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Method: EPA 8260D

Form 6
Initial Calibration

Instrument: GCMS_2

Flags
a - failed the min rf criteria
c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 4.892
Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Method: EPA 8260D

Form 6
Initial Calibration

Worksheet #: 696297

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.
